## About Me

I consider myself a very talented individual who can fit into doing anything in a professional way where domain meets passion and interest.

I am most passionate about IT development; building software solutions, being customer-centric, quality uncompromising, develop innovations engaging platforms in the web and mobile space with an understanding of electronics, UI, UX, and AX.

I am also passionate about photography, with an eye for detail and perfection, that can expose a subject to compelling storytelling or compelling the viewer to a read.

Another that I have a very keen interest and passion for is aquaculture (tropical fish breeding & prawn farming). Just as the previous one, I am also extremely eager to build the next generation of vertical agriculture farm.

I found myself to be able to switch between domains with ease and quick to understand business processes in a short conversation or interview.
